

Big Telecom's Big Non-Ionizing Radiation Lie

We hear it all the time. Microwave radiation is not a threat to our health because it is Non-Ionizing Radiation. So, it cannot affect your DNA. Crank up the Wi-fry. You will be just fine. Right?

Not. 4G/5G technologies consist of multi-photon polarized, high power density fields and beams. The radiation through the microwave frequency range is classified as non-ionizing based on a single photon. All that means is that a single photon does not have enough energy to energize an electron of any substance enough for it to give up an electron and become ionized. Multi-photon fields and beams have entirely different characteristics than a single photon wave. They can be exponentially more ionizing and harmful to life and property.

Telecom propaganda frequently makes the comparison to light that has frequencies a million times higher and higher power density in the environment. They assure us that microwaves are less harmful. Yet if you look at the sun too long you will go blind. If you stay too long in the sun you will get burned. If you get sunburned while you are being microwaved, your sunburn will be worse. And that light can be used to produce dangerous laser beams. Read how light becomes a dangerous laser with multi-photon pulsed beams: https://en.wikipedia.org/wiki/Photoelectrochemical_process#Multi-photon_ionization

The electrons of substances in the environment that come under the influence of microwaves can be energized by other sources of radiation in the environment, such as light. Multi-photons may be of multiple sources. Even if a microwave field is relatively weak, this multiphoton ionization is much more efficient than a direct one-photon ionization at high photon energies and can result in ionization. An example and the mechanism is described here:

The 4G/5G Non-Ionizing Radiation story is a fairy tale. It is a total misconception of the world we live in where ionization takes place all the time. The addition of microwaves to the environment increases the ionization. It increases oxidation, aging, illness and brings about early death. The massive increase in radiation from 5G is a theft of life itself. Do you consent?
